Loofah

The loofah is a tropical annual vine that is particularly moisture-resistant among the Cucurbitaceae family. It grows well in moist, fertile soils.
It doesn't grow well in low temperatures, high humidity, or drought, with a growing temperature of 77 to 86°F. It also grows well in high sunlight, and its soil should have a pH range of 6.0 to 7.5.

1) **START SEEDS EARLY:** SOAK, INDOORS OR MID-MAY SOW
2) **PLANT IN FULL SUN:** 30 × 30 CM SPACING
3) **USE STRONG TRELLIS FOR VINES:** CAN REACH 6–7 M
4) **WATER EVENLY:** ~1″/WK, FEED N-FERTILIZER

How To Process the Loofah Plant

1. Green Curtain

1. Set up the vertical poles
2. Attach the horizontal bar
3. Hang the net
4. Secure the base
5. Guide plant vines onto the net

2. Sponges Scrubbing pads

1. Dry loofah in a well-ventilated place and let it dry naturally until the surface becomes brown and crispy.
2. Peel the loofah by hand and remove the seeds.

3. Water

1. CUT LOOFAH STEMS AT ABOUT 50-60 CM.
2. CLEAN THE CUT SECTION WITH ALCOHOL.
3. BEND THE STEM AT THE BASE AND INSERT THE STEM INTO THE MOUTH OF THE CONTAINER.
4. COVER WITH TISSUE AND PLASTIC WRAP TO KEEP OUT DUST
5. AND SECURE WITH PLASTIC STRING.
6. 24 HOURS LATER, ABOUT 1 LITER OF WATER CAN BE COLLECTED.
